Enhancing Cybersecurity with CyberSmart

Company Overview

Universal Smart Cards (USC) is a leading manufacturer of smart card technology, operating from three offices across the UK. Given the security-centric nature of their business, USC's directors are committed to continuously reviewing and strengthening their data and network security protocols.

The Challenge

After obtaining Cyber Essentials certification, USC sought to ensure that their network devices and employees remained secure on a daily basis. They required a solution that would reinforce cyber awareness, streamline policy management, and provide comprehensive reporting – without the need for time-consuming meetings or manual interventions.

The Impact

IT Managed Services recommended the implementation of CyberSmart Active Protect. This solution offers 24/7 monitoring, self-paced cyber awareness training, automated policy management, and a robust reporting system to ensure full compliance. With CyberSmart Active Protect, USC could maintain a high level of security while reducing the administrative burden on their team.

The Solution

Since deploying CyberSmart Active Protect, USC has significantly enhanced its cybersecurity posture. The solution has improved cyber awareness among employees, provided continuous monitoring, and ensured that compliance status is always up-to-date and easily accessible. Regular reports offer USC valuable insights into their security standing, allowing for proactive management and swift response to potential threats.

“CyberSmart Active Protect has revolutionised our approach to cybersecurity. The continuous monitoring gives us real-time visibility into our compliance status, providing peace of mind and reinforcing our commitment to security. While we never take our security for granted, this tool is invaluable in our mission to remain a secure company.”

Kevin Loveman, Operations Director, Universal Smart Cards Limited

“The automation and ease of deployment of CyberSmart Active Protect have been game-changers for us. We can quickly script and activate the solution, ensuring a seamless integration with USC’s existing systems. The transparency in compliance and the improvement in employee cyber awareness are clear indicators of the solution’s effectiveness.”

Chris Rumsey, Operations Director, IT Managed Services Limited.
